June 2026 Final Examination

Date: June 23, 2026

Aids allowed: Only the aid sheet (provided with exam booklet)

Duration: 3 hours

Total Points: 50

Print your information in the following table:

Instructions

- Answer the following questions in the space provided on pages with a QR code. If you require additional space, use the Extra Space page with a QR code and clearly indicate the question number.
- Please write clearly using a pencil with a HB or darker lead. Do NOT use erasable pens. Regular pens with a dark ink are acceptable.
- To earn the full credit, you must show all steps/work that demonstrate the logical steps and course concepts you are applying in your problem solving. Final answers are worth at most 1 point.
- You are NOT allowed to refer to any resources (including an electronic calculator).
- You must complete the test individually and are NOT allowed to discuss with others during the test.
- If the question asks for a numeric answer (*these are starred*), your final answer should be written as a single expression involving only numbers and standard arithmetic operations. That is, a calculator should be sufficient to compute the final value. For example, you may leave your answer as $2e^3 \times \sqrt{8 \times 2.1} \times \log(4/3)$.
