

Exercise 1

SRS

- Obtain a complete list of all professors at the university
 - Randomly select n professors from this list (e.g. using random numbers)
-

Stratified Sample

- Divide professors into meaningful groups (strata), e.g.:
 - faculty/department (Math, Biology, Arts, etc.) or
 - rank (assistant, associate, full professor)
 - Take a simple random sample within each stratum
-

Cluster Sample

- Divide professors into natural clusters, e.g.:
 - departments or faculties
 - Randomly select a subset of clusters (e.g. 3 departments)
 - Sample all or take a subsample of professors within the selected departments
-

Systematic Sample

- Obtain a list of all professors (e.g. alphabetical or employee ID order)
- Choose a random starting point
- Select every k -th professor (e.g. every 10th professor)
